

## Innovative products:

### Penetrable Concrete Block for water percolations

This product is made with special combination of concrete which permits the water to flow through the pores of gaps available in it. This allows trees to breath by absorbing the water , it recharges the ground water, avoids the growth of Weed around the tree and gives aesthetic view around the tree

### Pervious Kerb Blocks with Optical Fibre Illuminators

Road kerb blocks have been designed to improve the visibility of running vehicle in low light time frames due to non-functioning or non-existent streetlights and also the flooding of roads due to improper drainage.
