(57) Abstract :

Transportation System in metro policies has been improved a lot in recent past. Before 5 to 6 years if someone wants to reach destination after reaching particular metropolitan city either they need to use Public Transport like Local Bus, Local Trains and Metro Trains based on the availability. The other option they had is renting a Car or Cab or Taxi. But now the options have changed drastically, like Local Call Taxis, Auto Rickshaws, Sharing of Local Car Taxi or Auto Rickshaw, Bike Sharing along with existing services like Public Transport and Private Transport as discussed. The Modern Transportation system has leveraged challenges to technology. Now there are so many modes of transportations available in Metro Politian Cities like Bengaluru, Delhi, and Mumbai etc., Now the question is how much fast a person can reach his destination in a cost effective way. And how many vendors are really getting profited by the transportation services they are providing. How many people are satisfied with the services they are using for the money they paid By considering all of the above, the Concept of Why Wait - Reach Smart has been designed by keeping Inter Modal transportation system in Mind. What is Basically Intermodal Transportation System As we already aware of Multi Modal Transportation system for Cargos or freights, based on the same concepts with respect to human being this particular concept of Intermodal Transportation System is Developed. The main objective here is to use Inter Modal Transportation Services under one umbrella based on the need and pay the entire transportation cost at once after completing the trip.
